

In Class Reading Data Files

Members: Jessica Bonin, Juliana Berube, Julia Vinyard, Sonja Glasser, Timothy Nsubuga

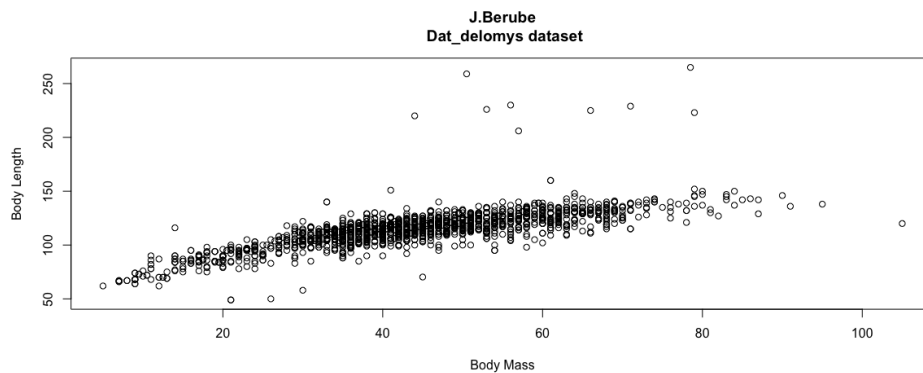

1. The R-code you used to read each of the three data files. Do not use file.choose()!

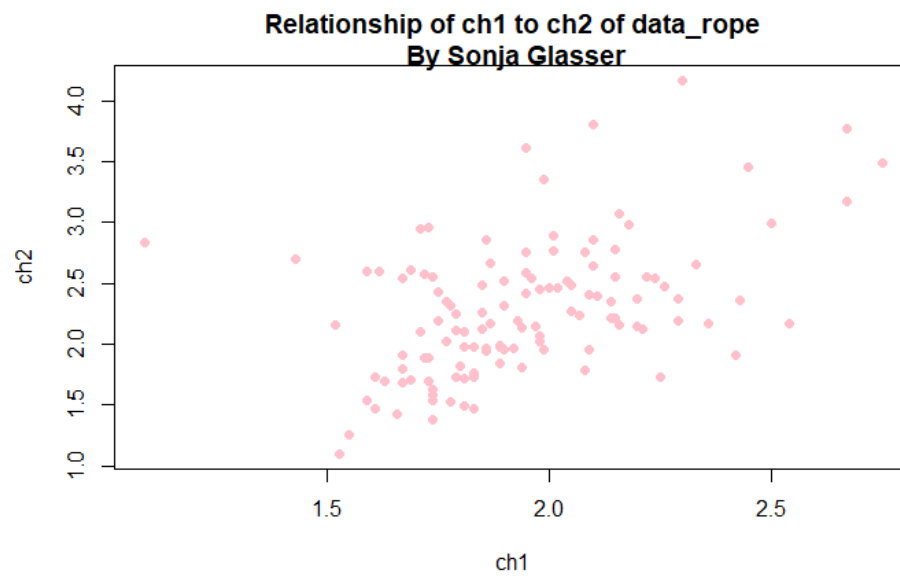

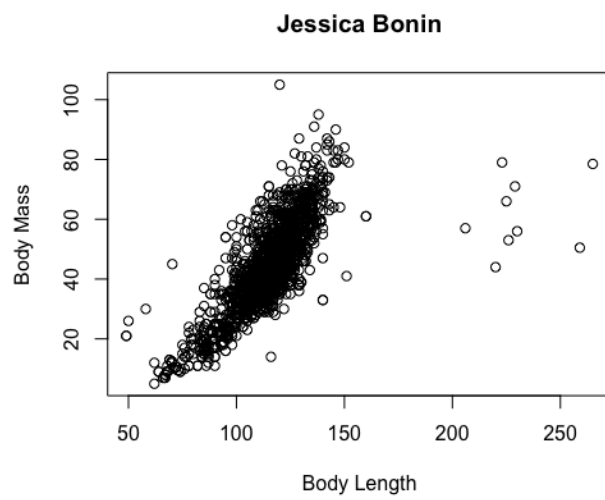

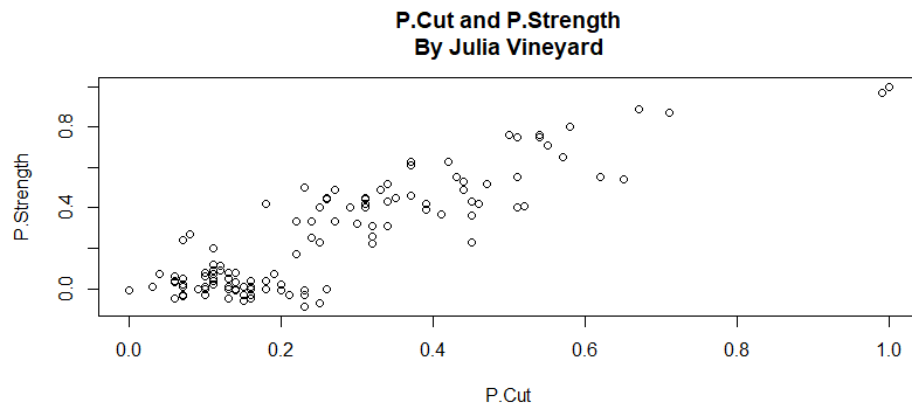

```
dat_rope<-read.csv(here("data", "rope.csv"))
```

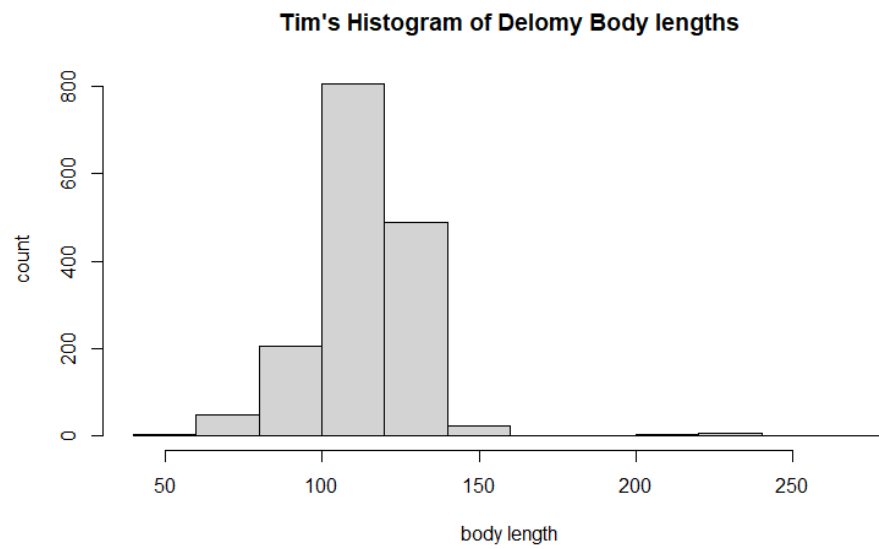

```
dat_catrate<-read.csv(here("data", "catrate.csv"))
```

```
dat_delomys<-read.csv(here("data" , "delomys.csv"))
```

2. A scatterplot or histogram from each group member.

3. One question or difficulty that your group encountered.

There was some difficulty with pulling the dataset files into R. We are also curious about the metadata for the datasets.
